

Specialising in

- › Innovative, practical and user friendly industrial design or redesign with complete manufacturing drawings.
- › Obtaining regulatory local authority approvals for industrial products.
- › Gaining product compliance by improved QA and manufacturing processes.
- › Product troubleshooting and failure investigations.
- › Enabling manufacturing companies to obtain required QA compliance to relevant industry standards by process streamlining and development with a focus on output efficiency.
- › Diversification into other fields of consultancy on a contract basis as required.

Areas of expertise

Design solution to installation difficulties

After observing the installation difficulties of a telecommunication column ground stub, Katalin, while working for CSP Pacific, has initiated the concept and developed a product solution enabling easy underground cable access from various directions. This resulted in significant time saving and reduced installation costs and has been successfully used for 10 years by a range of telecommunications companies in New Zealand.

Transition of NZ manufacturing business to an import model

Katalin played the key technical role, while working for CSP Pacific, in transitioning a NZ manufacturing business to an import model. This included designing a streamlined product range to comply with all relevant standards / specifications while meeting market expectations. Also set up acceptable design, quality and process requirements for the Company and the overseas supplier.

Troubleshooting of imported product and quality compliance

Katalin's technical input into the quality investigation of an imported product was instrumental in gaining compliance. A solution was offered to the overseas manufacturer and also further modifications were initiated, which resulted in increased quality and output. Due to the success of the site visit further invitations have been extended. Project done while working for CSP Pacific.

Innovative in ground corrosion solution

Katalin has played a pivotal role in developing a field proven, innovative and cost effective corrosion resistance solution while at CSP Pacific. This product is offered with a 20 year system warranty and is now specified by local councils as their preferred option for corrosion protection.
